WORK EXPERIENCE

FISITA - fisita.com - July 2019 - present day
- Working with previous and external php developer and staff to upgrade, design and develop existing websites
- Creating and enhancing online review system for its suite of international technical events
- Currently developing a SSR website with Nextjs and fetching data from a existing backend to display on front-end (code available on request)
- Currently planning and designing a platform for an international database of engineers which has an estimate of over 200000 engineers already interested.
- The platform will allow the users to sign up to a members society and then the option to sign up to the international database.

Achievements at Fisita
- Host a react built static website on AWS S3 using Serverless to develop, deploy, and monitor the website
- Use a Lamda function to collect interest for a new company product using DynamoDB and a existing send grid account to send a confirmation email that was designed in Adobe Dreamweaver
- Audited all databases (mySQL) to acquire 20 years worth of contacts ready for a new CRM system that is currently being implemented.

EDUCATION

EDX - Oct 2019 Dynamo DB: Building NoSQL Datbase Driven Aplications
